**SEPTEMBER, 2010**

**COMMISSION FOR AGRICULTURAL COSTS AND PRICES**  
**REPORT ON PRICE POLICY FOR COPRA FOR THE 2011 SEASON**

In this report, the Commission for Agricultural Costs and Prices (CACP) presents its views on the price policy for copra for 2011 season. The Commission, in its report for the 2010 season, which was submitted on September 9, 2009, recommended retaining the Minimum Support Price (MSP) for fair average quality (FAQ) of milling and ball copra at 2009 level, viz., at Rs.4450 and Rs.4700 per quintal respectively. The recommendation was subsequently accepted by the Government. For 2011 season, the Commission recommends that:

**(i) The MSP for milling and ball copra be :**

		<b>(Rupees per quintal)</b>	
<b>Milling copra</b>	<b>:</b>	<b>Rs.</b>	<b>4525/-</b>
<b>Ball copra</b>	<b>:</b>	<b>Rs.</b>	<b>4775/-</b>

**(para 27)**

**(ii) NAFED, through a well designed action plan and calendar of operation should procure a substantial share of the peak season market arrivals in a state, which will help in stabilising the market prices as also enable more quantity of coconut to conform to FAQ standards.**

**(para 15)**

**(iii) to rationalize the import duties on palm oil and its fractions so as to allow level playing field for domestic edible oils, including coconut oil.**

**(para 16)**

**(iv) the concerned state governments should take necessary action to make the procurement of green/de-husked coconut effective at the ground level through equipping the primary procurement agencies with processing facilities for conversion of coconut into copra.**

**(para 17)**

**(v) the Coconut Development Board and the State Government of Andhra Pradesh may immediately address the problem of wrinkled coconut/copra in the state through re-plantation of all old and senile gardens, implementation of integrated pest management in all the affected gardens and development of micro irrigation programmes. The Government of India, in the interim period, may consider continuing the relaxation to such produce of the state for PSS operations. (para 18)**

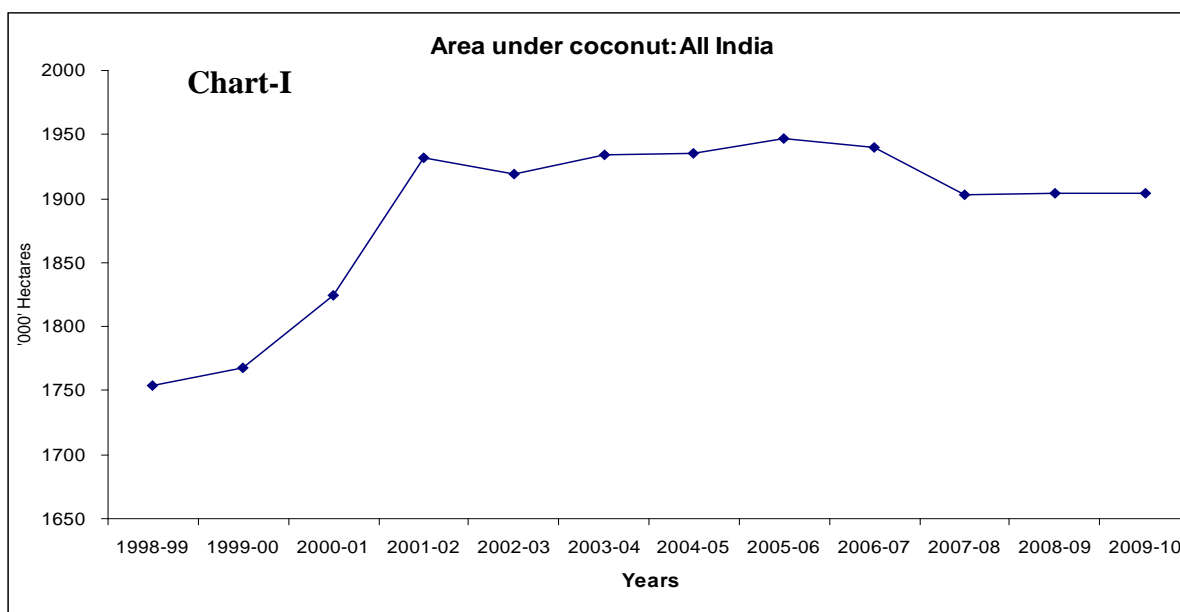

**(vi) coconut farmers should be encouraged to take up minor irrigation facilities like tanks, wells, tube wells, drip irrigation etc by providing financial assistance under various existing schemes of the Government of India like Rashtriya Krishi Vikas Yojana (RKVY), or through CDB/ State Government programmes, which will help in improving the quality and productivity of coconut farming. (para 19)**

**(vii) agricultural operations including operations related to coconut cultivation may be included among the eligible activities under MNREGA to address the labour shortage problem in agriculture. (para 20)**

2. India is one of the three largest producers of coconut in the world along with Indonesia and Philippines. In 2008, it emerged as the second largest producer of coconut globally, next to Indonesia. In area, India occupied the third position after Indonesia and Philippines and topped the list in terms of productivity, during the same period. India contributes about 24 percent of the world production and 17 percent of the world area under the crop (Source: Asian Pacific Coconut Community (APCC) Statistical Year Book 2008). In spite of a dominating position in the world coconut scene, the sector domestically suffers from major handicaps in the form of old and senile palms, frequent occurrence of pests and diseases, competition from cheap imported edible oils, limited development of value addition, etc. Government needs to focus on these areas to make the sector vibrant and profitable. The major producing states of coconut in the country include Kerala, Tamil Nadu, Andhra Pradesh and Karnataka. The crop is also grown in Assam, Maharashtra, Orissa, West Bengal, Goa, Andman & Nicobar Islands, Lakshadweep and Puducherry. In 2008-09, India produced 14745 million nuts from an area of 19.04 lakh hectares as

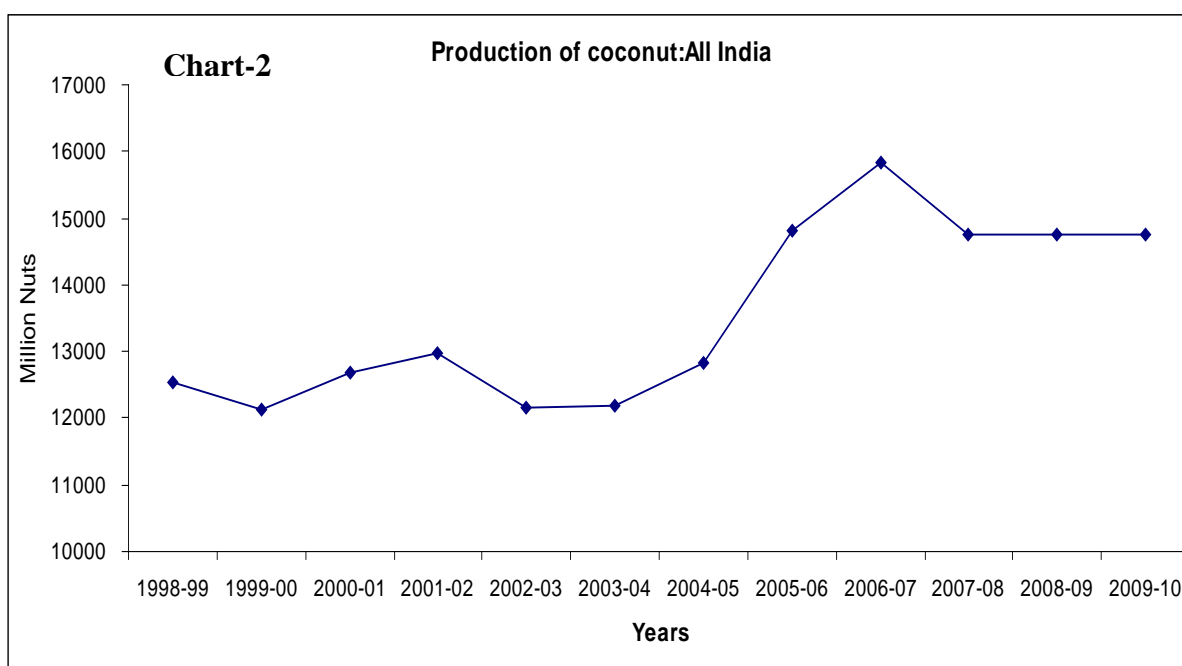

against 14744 million nuts produced during 2007-08 from an area of 19.03 lakh hectares. For 2009-10, the estimates of production and area are 14745 million nuts and 19.04 lakh hectares respectively. (Data source: Directorate of Economics and Statistics, Ministry of Agriculture, Government of India).

3. The area under the crop has not witnessed any significant variation during the last nine years or so. While the area coverage was 19.32 lakh hectares in 2001-02, the estimate for 2009-10 is 19.04 lakh hectares. In between, there were slightly better years like 2004-05 and 2005-06 when the area coverage reached a level of 19.35 and 19.47 lakh hectares. The year 2006-07 witnessed a reduction in area to 19.40 lakh hectares which was further reduced to 19.03 lakh hectares in 2007-08. The average annual growth rate in area during the period 1997-98 to 2008-09 was only 0.69 percent compared to 3.49 percent achieved during the period 1987-88 to 1997-98. One striking aspect is the trend of declining area in the leading coconut growing state of Kerala. While Tamil Nadu, Andhra Pradesh and Karnataka posted average annual growth rates of 3.19 percent, 0.44 percent and 2.84 percent respectively during the period 1997-98 to 2008-09, the annual growth rate declined in respect of Kerala at (-)1.2 percent during the same period. Area shift towards more remunerative crops like rubber is gradually taking place in Kerala. The trend in area coverage is shown in the Chart-1.

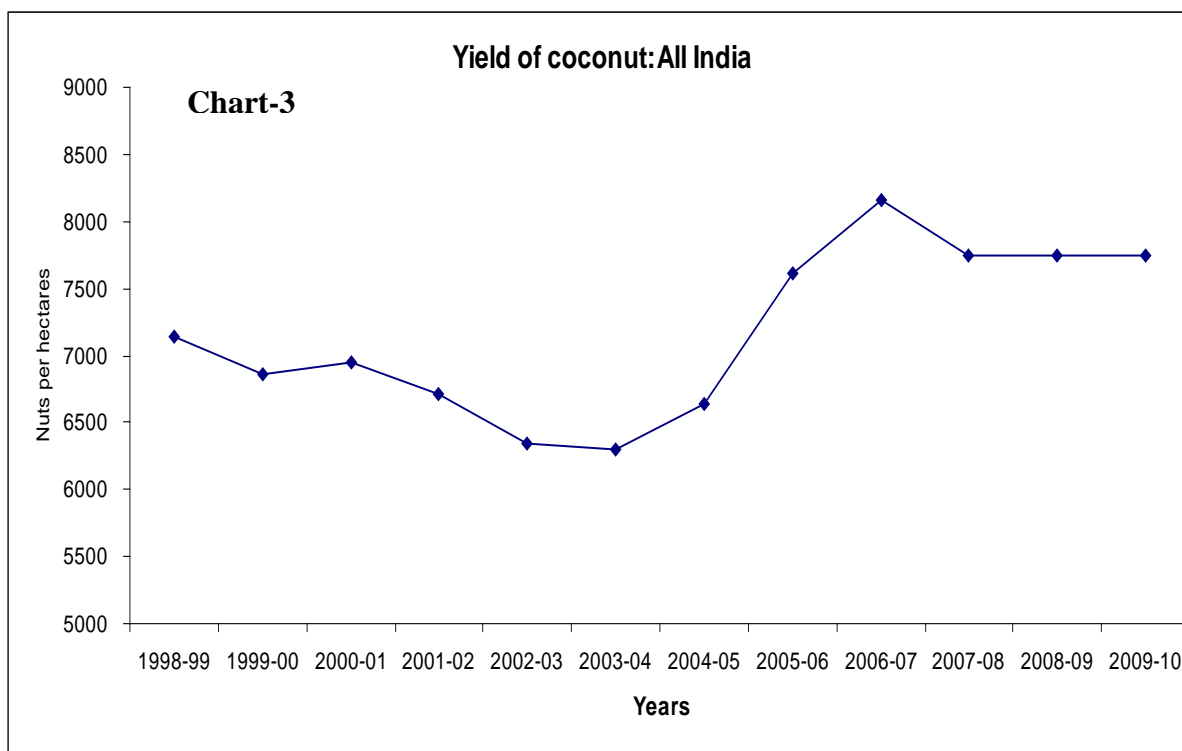

Source: Directorate of Economics & Statistics, M/o Agriculture, Govt. of India

4. The performance on the production front was better than that of the area with the annual growth rate during 1997-98 to 2008-09 at 2.01 percent, though the growth rate registered a decline compared to the 5.86 percent achieved during 1987-88 to 1997-98. The coconut production, which was 12963 million nuts in 2001-02 declined to 12160 million nuts in 2002-03, however witnessed consistent increase during the next four years to reach a level of 15840 million nuts in 2006-07. The production during 2007-08 was 14744 million nuts, a decrease of 6.92 percent over the production achieved in 2006-07. Estimates for 2008-09 and 2009-10 indicate almost same levels of production as 2007-08 at 14745 million nuts. The inter-year fluctuations in production could be observed in the Chart-2.

Source: Directorate of Economics & Statistics, M/o Agriculture, Govt. of India

5. The yield levels during the last nine years have moved in a wide range of 6298 nuts/ha during 2003-04 to 8179 nuts/ha in 2006-07. The year 2007-08 registered a productivity of 7747 nuts/ha, 5.28 percent lower than the productivity achieved in 2006-07. The yield estimate for 2008-09 and 2009-10 is marginally lower than the 2007-08 level at 7744 nuts/ ha. The annual rate of growth in yield during the period 1997-98 to 2008-09 was 1.32 percent compared to 2.29 percent achieved during the earlier period, 1987-88 to 1997-98. The trend in productivity of coconut is indicated in the Chart-3.

Source: Directorate of Economics & Statistics, M/o Agriculture, Govt. of India

6. State-wise analysis of performance shows that Kerala leads in area coverage and production, accounting for about 43 percent and 38 percent respectively (as per 2008-09 estimates). The state, however, lags in productivity, which has been consistently remaining below the national average. Small size of farms, dependence on rainfed cultivation, predominance of old and senile trees in homesteads and high incidence of disease and mite attack hamper the yield levels in Kerala. Tamil Nadu tops the list in productivity with an average productivity of 12974 nuts/hectare (2008-09 estimates), followed by Andhra Pradesh (11079 nuts/hectare). Higher productivity in Tamil Nadu is attributed to factors like initiation of hybrid varieties and drip irrigation system, presence of younger trees, big size plots, use of modern and scientific system of farming etc. Though in area coverage, Karnataka has the second position, it has one of the lowest productivity in the country (4040 nuts/ha during 2008-09). Low productivity has been attributed to plant diseases and attack by pests together with frequent occurrence of drought. The other coconut producing states like West Bengal (12276 nuts/ha), Puducherry (13500 nuts/ha) and Lakshadweep (17667 nuts/ha) have been registering impressive yield rates, higher

than even some of the major producing states (as per 2008-09 data). However, states like Goa, Tripura and Andaman & Nicobar Islands suffer from low productivity.

(Table 2)

7. Coconut cultivation is highly susceptible to diseases and attack by pests. Low productivity in Kerala is attributed, among others, to high incidence of root wilt disease and mite attack. In Karnataka, coconut yield gets reduced to an extent of 20-30 percent due to pests and diseases. The irregular size and shape of coconut in Karnataka is also attributed to severe pests and diseases. A recent survey conducted by Coconut Development Board (CDB) has indicated 80 percent mite infestation in all the major coconut growing districts of Tamil Nadu, however with less intensity. The problem is also prevalent in other states like Andhra Pradesh and Orissa. Though CDB has been implementing programmes to address this issue, the continuation of this problem is a concern.

8. The price of coconut is influenced by the demand and supply position of coconut oil. The details of coconut oil balance sheet are indicated in Table 1.

**Table-1: Demand and Supply Position of Coconut Oil**

\*: Provisional

9. During the year 2009, the price of raw coconut showed significant decline and was 8 to 21 percent lower than the corresponding monthly average prices of the previous year at almost all centres. In the beginning of the year 2010, the prices reported higher than the closing average price of December 2009 at majority of the markets; however, the same have been reporting mixed trends thereafter. At Thiruvananthapuram market in Kerala, in January 2010, the average price of raw coconut opened at Rs.4250 per thousand nuts and went up to a level of Rs. 4773 per thousand nuts in April 2010. At Kangayem market in Tamil Nadu, the average price of partially de-husked coconut opened at Rs. 4625 per thousand nuts in January 2010 and reported mixed trend to reach a level of Rs. 4500 per thousand nuts in April 2010. At Mangalore market in Karnataka also, the average price which opened at Rs. 7000 per thousand in January 2010 reported mixed trend thereafter and was Rs. 6700 per thousand nuts in April 2010 (Source: CDB). The WPI for coconut (fresh) for July 2010 was 7.61 percent higher than the index of corresponding period of 2009. (Tables 6 & 7)

10. As per the information provided by CDB, the monthly average price of milling copra reported at all the three major markets in Kerala during the current year upto June 2010, was below the MSP of Rs.4450 per quintal announced by the Government for 2010. During this period, the prices were moving in the range of Rs.3413 and Rs.3552 per quintal at Kochi market; between Rs. 3375 and Rs. 3502 per quintal at Alappuzha market and between Rs. 3398 and Rs. 3517 per quintal at Kozhikode market. The same trend could be seen at the major markets of Tamil Nadu also, with monthly average prices ranging between Rs.3200 and Rs.3350 per quintal at Kangayem market and between Rs. 3140 and Rs.3242 per quintal at Vellakoil market. In Karnataka, the price of ball copra started at high levels at Rs. 4736 and Rs. 4823 per quintal at Tiptur and Arsikere market in January 2010. However, the prices fell to Rs. 4382 and Rs. 4538 per quintal in March 2010 and upto June 2010, had been ruling below the MSP of Rs.4700 per quintal. While WPI for copra for January 2010 registered 8.0 percent decline over WPI of January 2009, WPI for July 2010 registered an increase of 8.2 percent over the corresponding period of 2009. (Tables 3 & 4)

11. The WPI of coconut oil for January 2010 showed a decline of 6.7 percent over the corresponding period of 2009. The subsequent months also exhibited the same trend with July 2010 WPI showing a marginal decline of 0.52 percent over July 2009. The monthly average price at Kochi market in Kerala was Rs.5049 per quintal which showed mixed trends during the subsequent months and was Rs.5240 per quintal in June 2010. At Kangayem market in Tamil Nadu, the prices exhibited volatility with prices opening at Rs.6080 per quintal in January 2010, which was reduced to Rs.4988 per quintal in April 2010, however showed steep increase in April 2010 at Rs. 6200 per quintal. (Tables 5 & 11)

12. Coconut oil and oil cake are the two major coconut products imported into the country. During 2009-10 (up to January 2010, as provided by CDB), India imported coconut products valued Rs. 9241.15 lakh, which was about (-) 3.9 percent lower than the imports during the corresponding period of 2008-09. Import of coconut oil during 2009-10 registered a decline of 6.1 percent compared to the previous year. India's exports of coconut products (excluding coir products), in value terms, during 2009-10 (up to January 2010) increased by 16.5 percent compared to the same period previous year. While export of coconut oil and coconut shell charcoal declined by 52.8 percent and 53 percent respectively, export of coconut fresh, coconut dry and copra increased by 82.4 percent, 62.8 percent and 53 percent respectively during this period compared to the corresponding period of 2008-09. (Table 12)

13. Globally, coconut production during 2008 increased by 3.4 percent from 2007 level, from 59.10 billion nuts to 61.10 billion nuts. Area coverage during the period witnessed marginal decline from 12.24 million hectares to 12.16 million hectares. (Source: Asian and Pacific Coconut Community (APCC) Year Book 2008). India's position as the largest producer of coconut in 2007 was reversed in 2008 with Indonesia topping the list with a production of 16.24 billion nuts followed by India with an output of 14.74 billion nuts. Philippines came third. During 2008 also, India continued to have the highest productivity at 7747 nuts/ha compared to 4273 nuts/ha of Indonesia and 3720 nuts/ha of Philippines. During 2009, international copra price dipped significantly as compared to 2008, from an average price of US\$ 816/MT to US\$ 480/MT. The copra price was US\$ 628/MT in April 2010, which was about 26

percent higher than April 2009. In May and June 2010 also, prices were about 12 percent and 36 percent higher than prices of the corresponding months of 2009.

(Table 8)

14. The MSPs for milling copra and ball copra for 2010 season were retained at the 2009 levels of Rs.4450 per quintal and Rs.4700 per quintal respectively. Both NAFED as well as CDB in their communication to the Commission have indicated that, like the previous year, there have been no impact of procurement on the market prices and the prices continue to rule below MSP. Two reasons reported for this situation are: (i) inadequacy of procurement and (ii) availability of large quantity of imported palm oil and other edible oils at cheaper rates. The Table-2 indicates the procurement position during 2009-10.

**Table-2: Procurement of Copra under PSS during 2009 and 2010 season**

(Quantity in MTs)

State	Procurement during 2009	Procurement in 2010 (as on 31.8. 2010)
<b>1. Copra (milling)</b>		
Kerala	21145	20973
Tamil Nadu	19296	14962
A&N Islands	5692	4872
Lakshadweep	1537	2474
Andhra Pradesh	510	2156
Total (milling copra)	48180	45037
<b>2. Ball copra</b>		
Karnataka	1250	244
<b>3. De-husked coconut (Kerala)</b>	15000	22144
Total procurement	64430	67425

Source: NAFED

15. During 2009, NAFED procured 48180 MTs of milling copra. The production of copra during 2009 was 8.80 lakh MTs. Hence, procurement of milling copra by NAFED came to about 5 percent of the total copra production during 2009. There is, therefore, immense scope for increasing the procurement of copra, which is essential for stabilizing the prices in the market. According to an analysis by CDB, if 50 percent of the peak season production in a producing state is procured under PSS operations, it would definitely make an impact in the market. Peak season procurement will also allow more coconuts to conform to FAQ standards. Therefore, the Commission recommends that **NAFED, through a well designed action plan and calendar of operation should procure a substantial share of the peak season market arrivals in a state, which will help in stabilising the market prices as also enable more quantity of coconut to conform to FAQ standards.**

16. Another reason reported for the continued low prices of coconut /copra in the domestic market is the availability of imported edible oils, especially palm oil, at cheaper rate, facilitated by the zero percent import duty on crude palm oil and 7.5 percent on RBD palm oil, which has a direct impact on the local prices of coconut oil. Many coconut producing states have recommended re-imposition of import duty for crude edible oils at the pre-2008 levels to protect the domestic coconut farmers. In view of the concerns of the coconut farmers, the Commission reiterates its earlier recommendation **to rationalize the import duties on palm oil and its fractions so as to allow level playing field for domestic edible oils, including coconut oil.**

17. State Government of Kerala in their reply to Commission's questionnaire relating to the price policy of copra has strongly recommended announcing of MSP for green coconut. This demand of farmers and some state governments, especially of Kerala was already acceded to by the Government and from 2008 onwards, Government has been announcing MSP for de-husked coconut also. However, the procurement operations of de-husked coconut, according to feedback received from NAFED and CDB, has not been successful so far since the primary societies involved in the PSS operations do not have processing facilities. Since procurement

of de-husked coconut will be benefiting states like Kerala where only less than 5 percent of the farmers have the capacity to convert coconut into copra, the Commission recommends that **the concerned state governments should take necessary action to make the procurement of green/de-husked coconut effective at the ground level through equipping the primary procurement agencies with processing facilities for conversion of coconut into copra.**

18. State Government of Andhra Pradesh, during interactions with the Commission, had indicated the difficulty of farmers in the state to conform to the FAQ norms of coconut followed by NAFED for PSS operations. Large number of aged and senile gardens, mite infestation and continuous drought spells in the state have drastically affected the size and shape of the coconut and majority of the coconut/copra is in wrinkled form, which does not conform to the FAQ standards. Government of India, on a year to year basis has been providing relaxation to 30 percent wrinkled copra at a proportionately lower MSP procured from Andhra Pradesh. Due to non-availability of such a sanction, for 2010 season, there have been no procurement of such milling copra so far and the farmers were forced to sell their produce at much lower prices. The problem relating to wrinkled copra could be resolved as can be seen from the causes and it is not clear why this long standing issue of Andhra Pradesh farmers has not yet been addressed fully by the authorities concerned. The Commission recommends that **the Coconut Development Board and the State Government of Andhra Pradesh may immediately address the problem of wrinkled coconut/copra in the state through re-plantation of all old and senile gardens, implementation of integrated pest management in all the affected gardens and development of micro irrigation programmes. The Government of India, in the interim period, may consider continuing the relaxation to such produce of the state for PSS operations.**

19. The prospects of further area expansion in coconut farming in the coming years is not so encouraging in view of the demand from competing and more profitable crops like rubber in Kerala, oil palm in Andhra Pradesh etc. A scenario of area reduction also cannot be ruled out for the same reasons. So the efforts should

be towards consolidating the cultivation in the existing areas, through making it more profitable and remunerative. Coconut farming requires frequent irrigation and many of the problems like infestation by mites and pests, wrinkled nature of coconut in Andhra Pradesh and small size of coconut in Karnataka are attributed, among others, to drought conditions. Coconut cultivation in India is entirely rain-fed, except in Tamil Nadu. Development of micro irrigation facilities in coconut farms can go a long way in improving the quality and productivity of coconut farming. Commission is of the view that **coconut farmers should be encouraged to take up minor irrigation facilities like tanks, wells, tube wells, drip irrigation etc by providing financial assistance under various existing schemes of the Government of India like Rashtriya Krishi Vikas Yojana (RKVY), or through CDB/ State Government programmes, which will help in improving the quality and productivity of coconut farming.**

20. Scarcity of labour is a major problem in coconut farming, like in other agricultural crops. The problem is intensive in coconut cultivation in view of the perennial nature of the crop and need for skilled labour in harvesting the crop. The problem is said to be particularly severe in Kerala. One reason for the labour shortage in recent times is reportedly the implementation of Mahatma Gandhi National Rural Employment Guarantee Scheme (MNREGA). The Commission recommends that **agricultural operations including operations related to coconut cultivation may be included among the eligible activities under MNREGA to address the labour shortage problem in agriculture.**

21. The cost of cultivation for copra has been reviewed for changes in the cost of different inputs since the price policy report for 2010 submitted by the Commission. In that report, the Commission arrived at all-India weighted average cost of production of Rs.5.10 per nut, exclusive of conversion cost. In order to assess the likely level of cost of production of copra for the year 2011, the Commission used the Comprehensive Scheme (CS) estimates received from the Directorate of Economics and Statistics for the state of Kerala. The cost estimates under CS put the total cost per nut for the year 2008-09 at Rs.3.89 per nut, for the state of Kerala up by 2.91 percent from Rs.3.78 per nut for the year 2007-08. The actual cost estimates for the

years from 2006-07 to 2008-09 have been used to project the likely cost for the year 2011 by taking into account upward movement in the prices of different items of input and have been appropriately scaled up on the basis of wholesale price indices, and updated wage rates and information from the State Government of Kerala.

22. During August, 2009 to July, 2010, there has taken place an increase in prices of farm inputs such as fertilizers, electricity (for irrigation), non electrical machinery, lubricants, diesel oil, etc. In terms of Wholesale Price Indices with base 1993-94 = 100, the price of fertilizers has increased by 5.53 percent, of electricity, by 7.47 percent; non-electrical machinery, by 4.46 percent, tractors, by 9.40 percent; lubricants, by 10.95 percent; diesel oil (HSDO), by 14.67 percent, diesel oil (LDO), by 16.17 percent, etc. As is well known, the wage rate in almost all major states has gone up, with coconut growing states reporting the increase between 9 percent in Karnataka and 15 percent in Tamil Nadu. Andhra Pradesh has reported increase in wage rate by 12 percent. The wage rate in Kerala during January, 2010 to June, 2010 has gone up substantially and it stands at Rs.300 per manday.

23. For the year 2011, the projected C2 cost of production per nut in respect of Kerala is estimated at Rs.5.06, with total projected cost of cultivation per hectare at Rs.53244.18 and the estimated yield of about 11413 nuts per hectare. The Commission having only one cost estimate for copra under the Comprehensive Scheme, it has used projected cost of different states to arrive at all-India cost of production per nut. The cost projections for the year 2011 have also been received from the states of Kerala, Andaman & Nicobar Islands, Tamil Nadu and Karnataka. The Commission has also received replies from such agencies as NAFED and CDB. In keeping with the methodology of cost projections as followed in other crops, the Commission has derived the per unit cost of production of coconut for these states and arrived at per nut cost of production of Rs.6.00 for Kerala, R.5.50 for Andaman & Nicobar Islands, Rs.5.00 for Tamil Nadu, and Rs.5.89 for Karnataka. The all-India weighted average cost works out to Rs.5.15 per nut, weights being share of each of the coconut growing states in the total production.

24. Based on the recommendations of Expert Committee to Examine Methodological Issues in Fixing MSP (Alagh Committee), approved by the

Government of India, the Commission elicited information regarding additional items of input cost like transportation, marketing and crop insurance from the concerned State Governments as well as other agencies. Different State Governments like Andhra Pradesh, Karnataka, Kerala, Tamil Nadu and Andaman & Nicobar Islands, and also CDB have furnished information on transportation/marketing charges along with insurance premium for coconut plantation. As is evident from the concerned state replies, insurance premium for coconut plantation is given in terms of rates and the manner in which the crop insurance scheme is being implemented by the CDB in the coconut growing states. Being a recently introduced scheme, the different coconut growing states reported only the rates to be paid by the farmers.

25. The paucity of proper information constrains the Commission to adopt ad-hoc method of arriving at the per quintal input cost for these additional items of expenditure as part of input cost. Based on the available information contained in the state replies, the average transportation cost at all-India level is put at Rs.10.79 per quintal and marketing charges at Rs.6.00 per quintal. As regards the crop insurance premium, it is observed that with the all-India average of insurance premium of Rs.2.03 per palm and with about 150 palms per hectare and average yield of 11413 nuts per hectare, the per quintal cost of insurance premium in terms of 750 nuts per quintal comes to Rs.20.01.

26. In order to arrive at the estimated cost per quintal of copra, the Commission has taken the standardized conversion charges as given by the NAFED. The conversion charges per quintal, comprising 750 nuts come to about Re. 0.55 per nut i.e. Rs. 412.50 per quintal. By adding Re. 0.55 towards conversion charges per nut to all-India weighted average cost of Rs.5.15 per nut, the total per nut cost of copra comes to Rs.5.70. With 750 nuts per quintal, the per quintal cost for copra works out to Rs.4271.65. The modified cost inclusive of transportation charge of Rs.10.79 per quintal, marketing charge of Rs.6.00 per quintal and crop insurance premium of Rs.20.01 per quintal comes to Rs.4308.44 (approximately Rs.4308). Taking into account that the crop is raised under rainfed conditions and the increase in cost of production, there is a case for marginal increase in support price.

27. Thus, based on all the relevant factors, namely demand-supply situation, market prices, cost of production, etc., the Commission recommends that **the Minimum Support Prices (MSP) of milling and ball copra for the 2011 season, be as stated below:**

**(Rs. per quintal)**

**Milling copra : Rs. 4525/-**  
**Ball copra : Rs. 4775/-**
